

EAVESDROPPING PROTECTION

PROTECT YOUR BUSINESS AND TRADE SECRETS EFFECTIVELY NOW

New developments and strategies are interesting for all kinds of people, not just competitors. For almost every company, one of the greatest threats is the leakage of know-how to competitors. Equally serious can be the spying out of bidding documents and prices for orders. The continuous development of miniaturized surveillance electronics makes eavesdropping attacks increasingly easier and leads to an incalculable increase in the risk of eavesdropping for companies. The technology is becoming more and more affordable and can now be purchased by anyone and operated without technical understanding.

MAKING YOU SECURE

We check your premises to make sure you are protected against eavesdropping. Our experienced employees scan any sensitive rooms using the latest measuring technology to check for bugs or manipulation. The use of mobile x-ray technology means that nothing goes undetected. You receive a results report with specific recommendations for action to improve your eavesdropping protection. We will be happy to draw up an individual protection plan with you.

THE BENEFITS FOR YOU

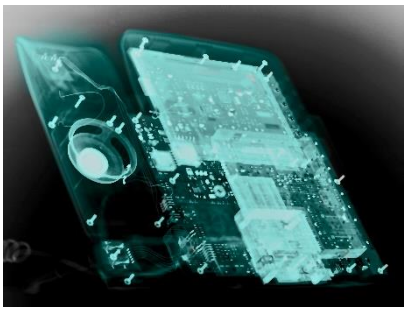

- We detect eavesdropping attacks in a targeted manner and provide specific information about eavesdropping protection in your sensitive meeting rooms.
- You will be given a detailed results report and specific recommendations for action.
- Our service is modular and can be structured according to your needs.
- Certified Security Provider

Federal Office for Information Security
Certified IT-Security Service Provider
BSI Certificate No: BSI-APS-9047

EAVESDROPPING PROTECTION
IMPLEMENTED PROFESSIONALLY BY EXPERTS

HIGH FREQUENCY SCAN
We use our high frequency scan to check your premises for active wireless transmitters (bugs) using the latest measuring technology

LINE AND DEVICE CHECK
The line and device check detects any bugging or tampering in your communications infrastructure. A mobile x-ray system and telephone and line analyzers are used to carry out the check.

VISUAL INSPECTION
A full visual inspection of your premises enables tapping devices that are not permanently active (e.g., voice recorders) to be found. We use the latest technical tools such as thermal imaging cameras, video endoscopes and semiconductor detectors.

You can rest assured that your business secrets will remain secret once we have carried out our checks. Our professionalism will pay off for you.

- HIGH-FREQUENCY INVESTIGATIONS
- VISUAL INSPECTIONS
- LINE INSPECTION
- X-RAY EXAMINATIONS
- THERMOGRAPHY
- SEMICONDUCTOR DETECTION
- SEALING TECHNIQUE
- DOCUMENTATION OF RESULTS

OPTIONAL SERVICES

- NOISE INSULATION
- CONFERENCE MONITORING
