

Cyber Defense for Everyone!

CyberProtect revolutionizes
managed cyber defense

The number of cyber attacks is rising, the legal requirements for cyber security are growing, and the potential attack surface is also increasing with the degree of digitalization. And your IT security team? Particularly for small and medium-sized companies it is becoming increasingly challenging to set up cyber defense from within their own ranks. After all, firewalls and antivirus filters alone are not enough. You need a team of security specialists who are available 24/7, quickly recognize a security incident and act immediately.

Defensive readiness as a service

To ensure that security remains feasible for all companies, we offer a cyber defense service package that is second to none. We make cyber defense radically simple and fast to deploy. And we offer you professional detection, defense and containment at an unbeatable price-performance ratio.

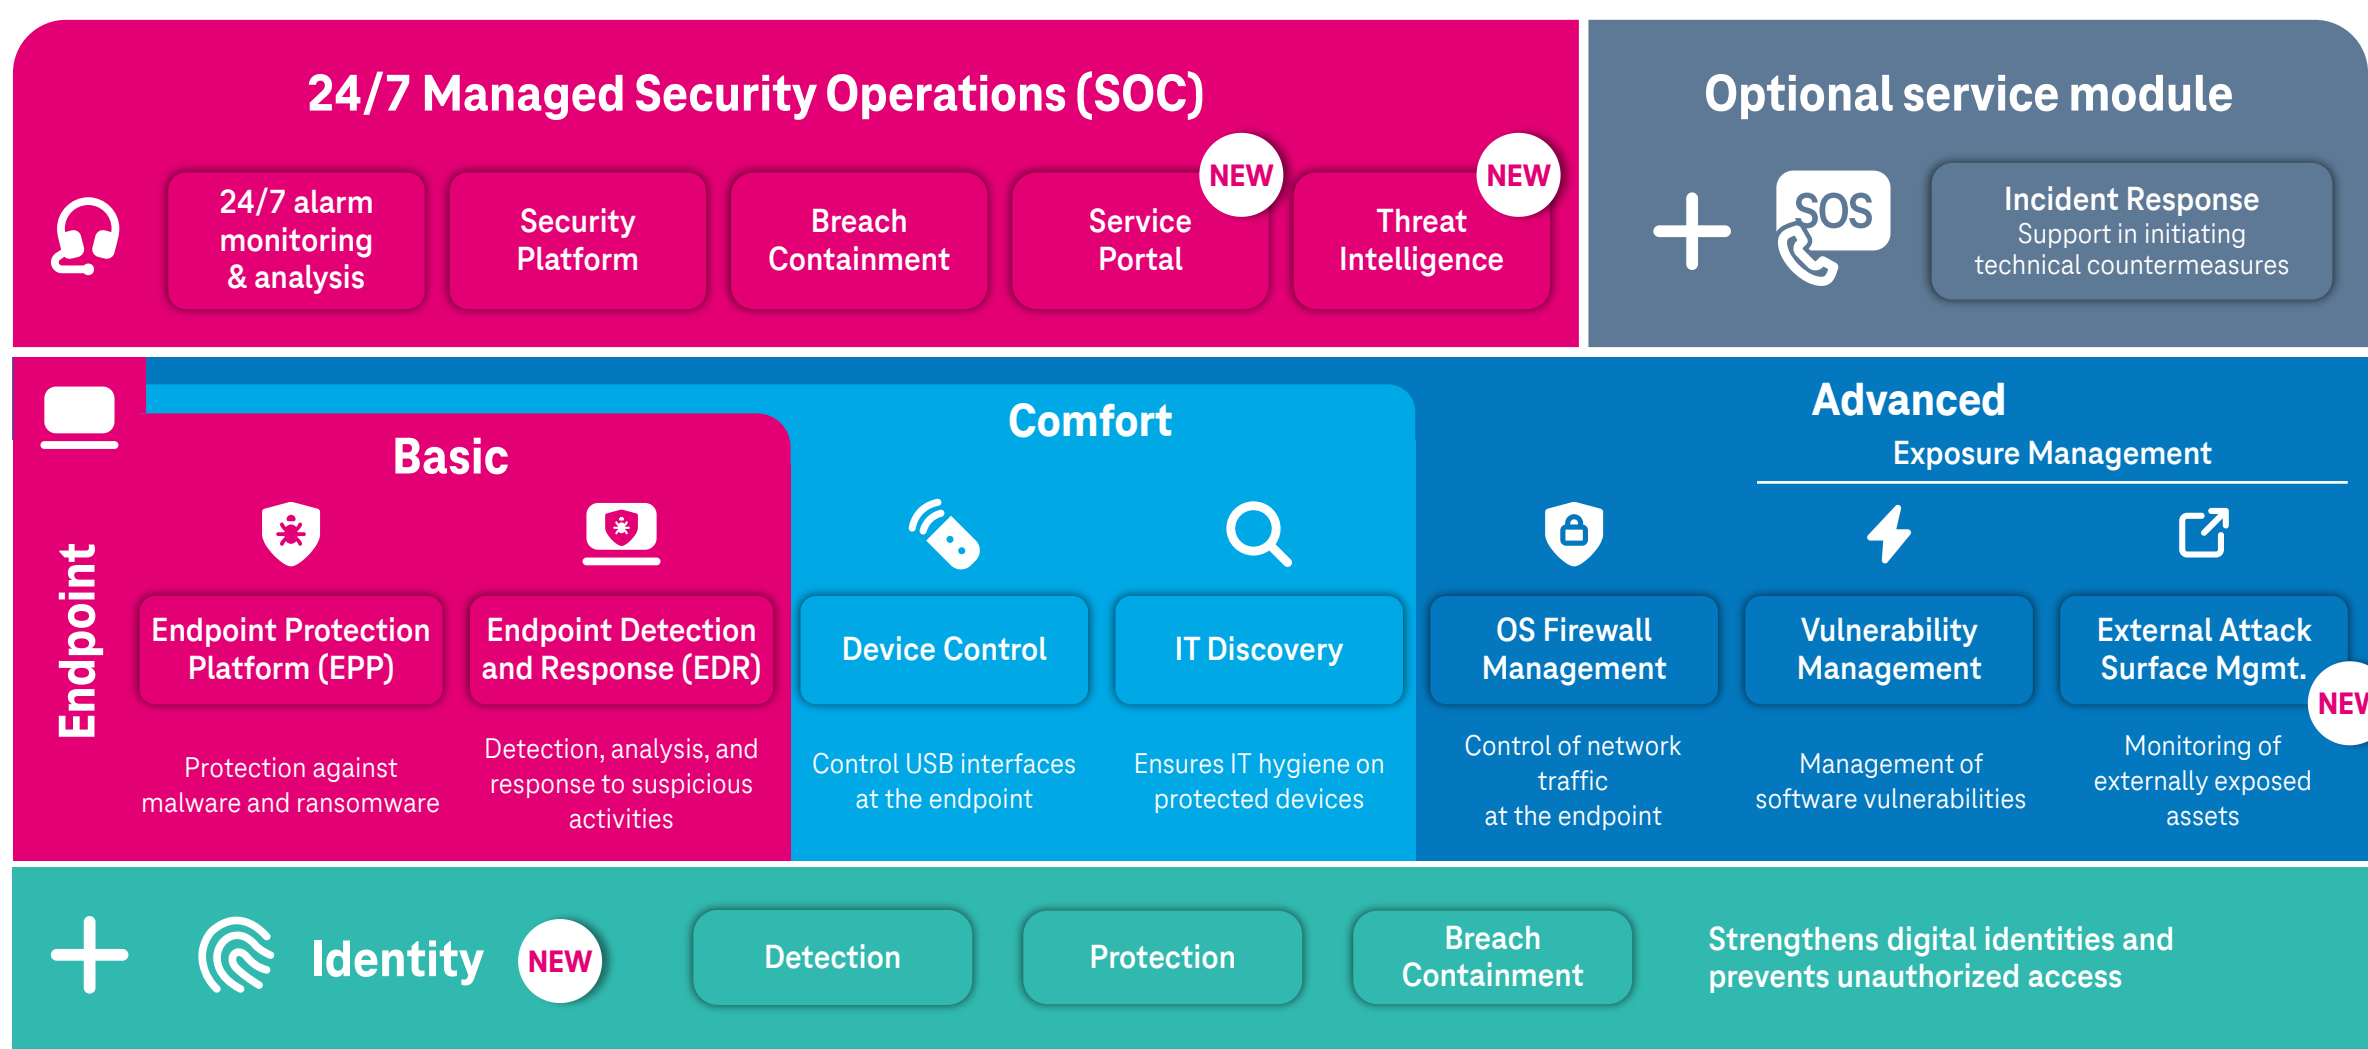

Three packages

Every company is unique, which is why we have built **CyberProtect** in a modular way. There are three packages available: **Basic**, **Comfort** and **Advanced**. You choose what suits your company, no matter how small it is!

Benefit" at a glance

- 24/7 vigilant – detect threats at an early stage
- Act immediately – contain attacks instantly
- Experts available for emergencies

CyberProtect – Basic. Comfort. Advanced.

Smart protection, strong defence.

As the operator of Europe's largest Security Operations Center (SOC) with 15 offices worldwide, we have highly professional teams of experts who ensure continuous monitoring. From 25 endpoints upwards, they are there for you – reliably, around the clock.

Your security architecture always remains future-proof, because an upgrade to a more comprehensive model is easy at any time. You ensure maximum security against cyber threats and at the same time benefit from minimum costs. **Your protection remains economical.**
